Steps for new members to get SDK and AP Hardware access

The steps below outline how prospective members join CAP and get AP SDK access, which enable members to access AP hardware. Note that anyone interested in exploring the SDK (without hardware access) can request it directly from Micron (Step 5 below).

1. UVa provides the CAP Membership Agreement to the prospective member’s technical point of contact (likely a faculty member or Dept. Chair).

2. Prospective member institution sends UVa a signed membership agreement that includes a list of requested users, and the membership fee payment. Member is responsible for complying with Section 6 (ExportControls) of the Membership Agreement. NOTE: Institutional review of the Membership Agreement can take weeks or even months; therefore, CAP advises prospective members to start this process as soon as possible (i.e., as soon as there is interest in joining CAP).

3. UVa cosigns the membership agreement and returns a copy to the member.

4. UVa will send the list of requested users to Micron.

5. All users from the member institution will go to Micron’s web portal (www.micronautomata.com) to sign the End User License Agreement (EULA) and download a local version of SDK that includes the GUI Workbench. NOTE: All users must agree to Micron’s EULA associated with the AP SDK. Institutional clearance of the EULA can also take weeks or months; therefore, CAP advises new members to start this process as soon as possible.

6. Micron will communicate to UVa the names of all users who request access, including those who are approved and those who are not approved access.

7. UVa creates user accounts for approved users and mails those users a key to access the SDK, according to the detailed security plan developed with Micron.

8. For users who are not approved access by Micron, UVa will work with the Member institution on a case-by-case basis to determine the reason and make the best accommodation we could.

Note: UVa users seeking access to the AP cluster will use the same process described in Steps 4-9.
